DETAILED ACTION

1. This office action is for the application entered on 11/12/2003.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1,4-7 are rejected under 35 U.S.C. 102(e) as being unpatentable over Chen et al. Pat. No. 6687725.

Regarding claim 1: Chen teaches a method comprising:

first step of obtaining a first primitive root α_1 on the basis of a first polynomial for a first extension from a first finite field to a field (col. 4, lines 10-22);

second finite a second step of obtaining a second primitive root α_2 on the basis of a second polynomial for a second extension from said second finite field to a third finite field, in which a coefficient of a O-th term is defined using said first primitive root α_1 obtained in said first step and the coefficient of the O-th term of said first polynomial (col. 4, lines 10-22 and col. 5, lines 10-20);

a third step of third finite field defining the processing on said using a base expressed using said second primitive root α_2 and obtained in said second step (col. 4, lines 49-67);

a fourth step of designing a processing circuit for the related processing on the basis of the processing defined in said third step (col. 4, lines 49-67).

Regarding claim 4: Chen teaches a method with defining process (col. 4, lines 49-67).

Regarding claim 5: Chen teaches a method with multiplying (col. 4, lines 49-67).

Regarding claims 6,7: These claims teach an apparatus or program for the same features of claim 1 and rejected in the same manner.

Art Unit: 2825

Allowable Subject Matter

Claims 2,3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The reason for allowance is that the prior art of record does not teach the dependent claims with all other features of the independent claim.
